

In regards to the proposal of vaccination passports in Montgomery County Maryland:

Vaccine passports are not only unconstitutional, but ethically wrong. The Supreme Court just ruled against OSHA's vaccine mandate for 100 employees or more - because it is unconstitutional. The vaccine passports will continue to further divide our community, segregating those who have made a personal medical decision to not get it. There are blacks, whites, asians, and hispanics in Maryland who will be segregated from the vaccinated population and treated as second class citizens, not allowed to go to restaurants, gyms, etc. For what reason? The CDC has confirmed that fully vaccinated individuals can still get Covid-19 as well as spread Covid-19 - specifically the Omicron variant that is going around right now. If the vaccinated can get Covid-19 and spread it, what sets them apart from the unvaccinated, other than a false moral high-ground that the media has shoved down our throats? Kim Roberts from The Texan wrote a news article stating: "Even a representative of the World Health Organization's (WHO) emerging diseases and zoonosis unit, Dr. Maria Van Kerkhove, stated, "From the data we have, it still seems to be rare that an asymptomatic person actually transmits onward to a secondary individual."" As someone who has always listened to authority and got my flu shot every year, I came to a pause at these facts.

The CDC Director Walensky recently stated that 75% of "Covid-19 deaths" occurred in people with at least four comorbidities. In layman's terms, most people who are healthy will be able to fight off Covid-19, while those who are unhealthy will struggle more. So, what about taking Vitamin D, the vitamin that every Covid-19 death was deficient in? What about exercise and healthy eating? None of these things are being pushed in place of the vaccine because Vitamin D and exercise don't make big pharma money. This is the sad truth. For those that do need more serious treatment for Covid-19, DARPA just released that Covid-19 is curative with Hydroxychloroquine and Ivermectin. These drugs have been painted as ineffective by the media, but that has been proved to be a complete lie. We need to be pushing healthy lifestyle choices and drugs that are proven to work - not just the ones that fit the narrative and bring in the big dollars.

If Covid-19 was truly more dangerous than the flu, the Covid-19 vaccine would not be so controversial. If the virus was truly as bad as the media is portraying it, we would not have had the Grammy's, the Emmy's, packed stadiums for football games, or shoulder-to-shoulder concerts...during a pandemic. They simply would not have happened. Why isn't the Covid-19 vaccine mandatory for celebrities and Congress? Why not White House staff members? The people of Montgomery County are no better or worse than these people - so why are we being treated as people who cannot make decisions for themselves? This is not The Hunger Games where we, the peasants, must bow down to the control of our government and the rich. This is America - home of the free because of the brave. "Every human should have bodily autonomy and be in charge of their own health. I am responsible for my health - just like all of you are responsible for yours. If you decide to eat McDonald's every single day for 3 months, you will be in very bad health. Does that mean that Mcdonad's should be shut down? No. Because everyone can make their own decisions about what they put into their bodies.

The media is telling us that the Nuremberg code does not apply to the Covid-19 vaccine because it is only for experimental medical treatments, however the Covid-19 is quite literally experimental. It is not approved by the FDA, but is only approved for Emergency Use Authorization (EUA). The FDA states: "The EUA process is different than FDA approval, clearance, or licensing because the EUA standard may permit authorization based on significantly less data than would be required for approval, clearance, or licensing by the FDA. This enables the FDA to authorize the emergency use of medical products that meet the criteria within weeks rather than months to years. EUAs are in effect until the emergency declaration ends but can be **revised or revoked as we evaluate the needs during the emergency and new data on the product's safety and effectiveness, or as products meet the criteria to become approved, cleared, or licensed by the FDA.**" We do not have any long term data on the Covid-19 shots, nor can we ask the doctor for an ingredient pamphlet, or a list of mild and severe, short-term and long-term side effects. Without this information, how can we have true informed consent? We cannot.

The two most important points in this argument are these: Segregation of any kind is never an ethical option and citizens cannot give informed consent to receive a vaccine that has little to no information available to the public.

Personally, I have had people tell me that their monthly period has changed. I've seen some of the most athletic people in the world drop on their playing fields, after getting the shot (and Myocarditis). I see people developing Bell's Palsy and uncontrollable seizures, directly after the shot. Perhaps the most important thing myself and others see is control. We can see that this vaccine is about control, and not safety. And that is why there are 30% of us in Maryland, who will not comply with this tyranny.

We won't do it if you force us out. We won't do it for a donut or to be put into some lottery. We won't be bribed, because we are not weak. We will stand up and we will protest if this tyrannical proposition passes. We will sue. We will make waves - because Americans, vaccinated or not, stand up for what is right, even when it is not easy.

I'd like to close by reminding the people of Montgomery County of a very important quote by C.S. Lewis, "Of all tyrannies a tyranny sincerely exercised for the good of its victims may be the most oppressive."

Thank you for reading,
Katharine S
